# Project 447 Part 4

Team SQLibrary
April 6, 2025

### 1 1.1 Project Overview

This database project focuses on designing a robust SQL-based Library Management System (LMS) that efficiently manages books, magazines, borrowers, transactions, and overdue monitoring. With the development of a relational schema, the project now emphasizes the logical structuring of data using entity-relationship (ER) modeling and relational mapping techniques. The system ensures data integrity through well-defined primary keys, foreign keys, and functional dependencies. By implementing a structured relational schema, the LMS enhances data accuracy, optimizes query performance, and maintains referential integrity, enabling streamlined library operations and improved decision-making capabilities for librarians.

## 2 1.2 Scope

The Library Management System (LMS) will manage various types of library materials, including physical and digital books, magazines, and user accounts. The system will enforce borrowing policies, track overdue items, regulate borrowing limits according to membership categories, enable reservations, and generate reports. In this phase, the focus is on mapping the conceptual ER model to a relational schema, defining attributes, primary keys, foreign keys, and establishing functional dependencies. The system will maintain strict normalization principles to minimize redundancy and ensure efficiency. However, it will not incorporate physical checkout mechanisms like barcode scanners or RFID tags, nor will it integrate with external content providers.

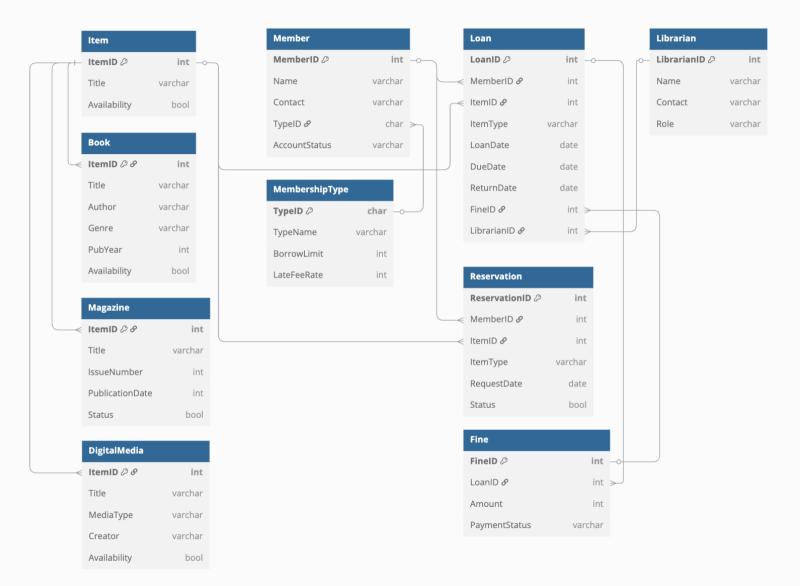

# 3 1.3 Glossary

- 3NF (Third Normal Form): A normalization form ensuring that all attributes are functionally dependent only on the primary key and not on any non-key attributes.
- DM: Shorthand for Digital Media.
- Foreign Key: A field in one table that references the primary key of another table, ensuring referential integrity.
- Functional Dependency: A constraint that describes the relationship between attributes in a relation
- ISBN: International Standard Book Number; a unique identifier assigned to books and other published materials.
- Library Management System (LMS): An architecture created to manage library assets, member enrollments, and transaction operations.
- Membership Type: A classification of customers that identifies the borrower ability and charge terms for these customers (e.g., normal, student, senior).
- Normalization: The process of organizing a database to reduce redundancy and improve data integrity.

- Overdue Monitoring: A device that tracks and records overdue books and calculates corresponding fees.
- Primary Key: A unique identifier for each record in a table.
- Reservation: A feature allowing clients to place holds on borrowed items.
- Notifications: Automated alerts for due dates, overdue items, and reserved book availability.
- Relational Schema: The structured representation of a database that defines relations (tables), attributes, and constraints.
- Item: A generalized category for the objects the library contains, categorized by the upper-case "I" to represent the entity that Digital Media, Magazine, and Book inherit from.

### 4 1.4 Relational Schema Diagram and Data Dictionary

The relational schema diagram and data dictionary for the Library Management System (LMS) are provided on the following pages. These diagrams and definitions visually represent the relationships between various entities in the system, as well as the attributes and constraints for each entity.

Item	Attribute Name	Data Type	Description
100111	ItemID	INT	Identification number assigned to items in the library system.
	Title	VARCHAR	Title of item in the library system.
	Availability	BOOL	Boolean value to denote if the item is available in the library sytem.
Book	Attribute Name	Data Type	Description
Book	ItemID	INT	Identification number assigned to book(s) in the library system. FK: Item
	Title	VARCHAR	Title of book(s) in the library system.
	Author	VARCHAR	Author of book(s) in library system.
	Genre	VARCHAR	Genre of book(s) in library system.
	PubYear	INT	Year of publication for book(s) in library system.
	Availability	BOOL	Boolean value to denote if the book(s) are available in the library system.
Magazine	Attribute Name	Data Type	Description
Magazille	ItemID	INT	Identification number assigned to magazine(s) in the library system. FK: Item
	Title	VARCHAR	Title of magazine(s) in the library system.
	IssueNumber	INT	Issue number of specified magazine(s) in the library system.
	PublicationDate		Date that magazine issue was published.
	Status	BOOL	
DigitalMadia			Current status of magazine(s) in the library system.  Description
DigitalMedia	Attribute Name	Data Type INT	Identification number assigned to digital media in the library system. FK: Item
	Title	VARCHAR	·
		VARCHAR	Title of digital media in the library system.  Type of digital media in the library system.
	MediaType Creator		Name of creator of digital media in the library system.
	Creator	VARCHAR	
Mamban	Availability	BOOL	Boolean value to denote if the digital media is available in the library system.
Member	Attribute Name	Data Type	Description
	<u>MemberID</u>	INT	Identification number assigned to member(s) in the library system.
	Name	VARCHAR	Name of member in the library system.
	Contact	VARCHAR	Contact information for member in the library system.
	TypeID	CHAR	Identification of type of membership member has in the library system. FK: MembershipType
Manchand 'a Tana	AccountStatus	VARCHAR	Status of member in the library system.
MembershipType		Data Type	Description
	TypeID	CHAR	Identification of type of membership in the library system.
	TypeName	VARCHAR	Name of the type of membership in the library system.
	TypeName BorrowLimit	VARCHAR INT	Name of the type of membership in the library system. Limit of items allowed to be borrowed at a time, depending on membership type.
	TypeName BorrowLimit LateFeeRate	VARCHAR INT INT	Name of the type of membership in the library system.  Limit of items allowed to be borrowed at a time, depending on membership type.  Rate of fees for late returns in the library system.
Loan	TypeName BorrowLimit LateFeeRate Attribute Name	VARCHAR INT INT Data Type	Name of the type of membership in the library system.  Limit of items allowed to be borrowed at a time, depending on membership type.  Rate of fees for late returns in the library system.  Description
Loan	TypeName BorrowLimit LateFeeRate Attribute Name LoanID	VARCHAR INT INT Data Type INT	Name of the type of membership in the library system.  Limit of items allowed to be borrowed at a time, depending on membership type.  Rate of fees for late returns in the library system.  Description  Identification number for loans of items in the library system.
Loan	TypeName BorrowLimit LateFeeRate Attribute Name LoanID MemberID	VARCHAR INT INT Data Type INT INT	Name of the type of membership in the library system.  Limit of items allowed to be borrowed at a time, depending on membership type.  Rate of fees for late returns in the library system.  Description  Identification number for loans of items in the library system.  Identification number assigned to member in the library system. FK: Member
Loan	TypeName BorrowLimit LateFeeRate Attribute Name LoanID MemberID ItemID	VARCHAR INT INT Data Type INT INT INT	Name of the type of membership in the library system.  Limit of items allowed to be borrowed at a time, depending on membership type.  Rate of fees for late returns in the library system.  Description  Identification number for loans of items in the library system.  Identification number assigned to member in the library system. FK: Member  Identification number assigned to items in the library system. FK: Item
Loan	TypeName BorrowLimit LateFeeRate Attribute Name LoanID MemberID ItemID ItemType	VARCHAR INT INT Data Type INT INT INT VARCHAR	Name of the type of membership in the library system.  Limit of items allowed to be borrowed at a time, depending on membership type.  Rate of fees for late returns in the library system.  Description  Identification number for loans of items in the library system.  Identification number assigned to member in the library system. FK: Member  Identification number assigned to items in the library system. FK: Item  Type of item in the library system.
Loan	TypeName BorrowLimit LateFeeRate Attribute Name LoanID MemberID ItemID ItemType LoanDate	VARCHAR INT INT Data Type INT INT INT VARCHAR DATE	Name of the type of membership in the library system.  Limit of items allowed to be borrowed at a time, depending on membership type.  Rate of fees for late returns in the library system.  Description  Identification number for loans of items in the library system.  Identification number assigned to member in the library system. FK: Member  Identification number assigned to items in the library system. FK: Item  Type of item in the library system.  Date that an item loan is taken out of the library system.
Loan	TypeName BorrowLimit LateFeeRate Attribute Name LoanID MemberID ItemID ItemType LoanDate DueDate	VARCHAR INT INT Data Type INT INT INT VARCHAR DATE DATE	Name of the type of membership in the library system.  Limit of items allowed to be borrowed at a time, depending on membership type.  Rate of fees for late returns in the library system.  Description  Identification number for loans of items in the library system.  Identification number assigned to member in the library system. FK: Member  Identification number assigned to items in the library system. FK: Item  Type of item in the library system.  Date that an item loan is taken out of the library system.  Date that an item loan is due to be returned.
